

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0027] with the following amended paragraph. Applicants note that the amendment, which is formal in nature, does not introduce new matter.

[0027] With regard to both embodiments described a motor may be connected to the apparatus in order to rotate the respective members **6** or **44** between open and closed positions. With regard to the first embodiment a motor may be attached to either one or both of rods or pins **20** and **22**. In the second embodiment of FIG. 3, a motor **85** may be attached accordingly to the rods **67** and **69** connected to legs **76** and **78** so that rotation of the rods or pins rotate the frame **44** between open and closed positions. The motor may include an electronic circuit that has an infrared receiver so that infrared signals may be sent from a remote control unit to control a motor to operate the apparatus. Hence, rotation of the members **6** or **44** can be initiated and stopped when the product is in the desired position.
